

Investigation report - Fuel Filter

"Imitation" means "Kobelco Non-Authorised Parts". Price may be cheaper than kobelco products, but it's not efficient and safe for the optimum performance of your Kobelco excavators.

'WARNING' : Imitation Filters may cause serious internal damage to your excavators.

WHAT'S IMITATION?

✓ Filtration

Filtration area is smaller than genuine, and meshwall is not in uniformity. Large particles can flow in and damage internal engine components.

Fuel Filter (Imitation)

✓ Quality

Poor adhesive quality. Dust bypasses the filter and flows into the engine to damage engine component parts.

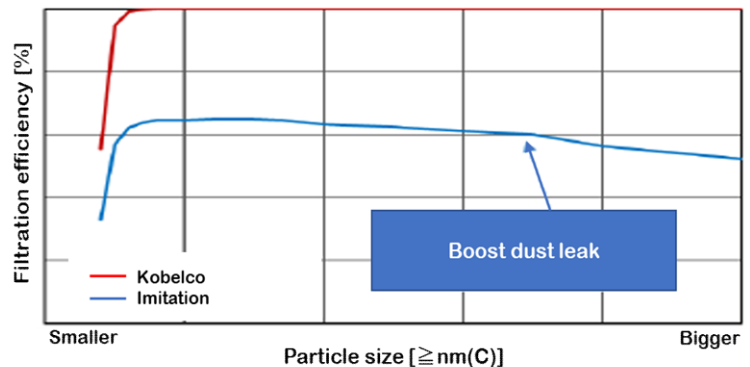

✓ Coating

There is no rustproof coating. Internal rust will occur daily.

✓ Performance

In an Imitation filter, due to poor adhesive quality at the filter cap, the dust spillage of bigger particles will (bypass) flow to the secondary filter thus reducing filtration efficiency.

This can cause premature injector failure, premature fuel pump failure and other serious engine troubles.

✓ No Warranty & Technical support from imitation suppliers.

Kobelco Products comes with High Quality and Genuine Warranty backed with expert technical support.

Ensure to use only KOBELCO Genuine Parts whenever replacing or during every periodical maintenance to maintain optimum performance of your machine.
